

I don't  
need  
**Postman**  
anymore...

A partial orange circle is visible in the bottom right corner of the image.

# What is postman anyways?

Postman is an application used for API testing.

It is an HTTP client that tests HTTP requests, utilizing a graphical user interface, through which we obtain different types of responses that need to be subsequently validated.

It's is a separate application, which makes it sometimes annoying, we have to switch it.

So how can you make it less annoying?  
(for VS code users only)

Swipe to know. 

# Download this **VS** **code** extension:

## Thunder Client v1.9.1

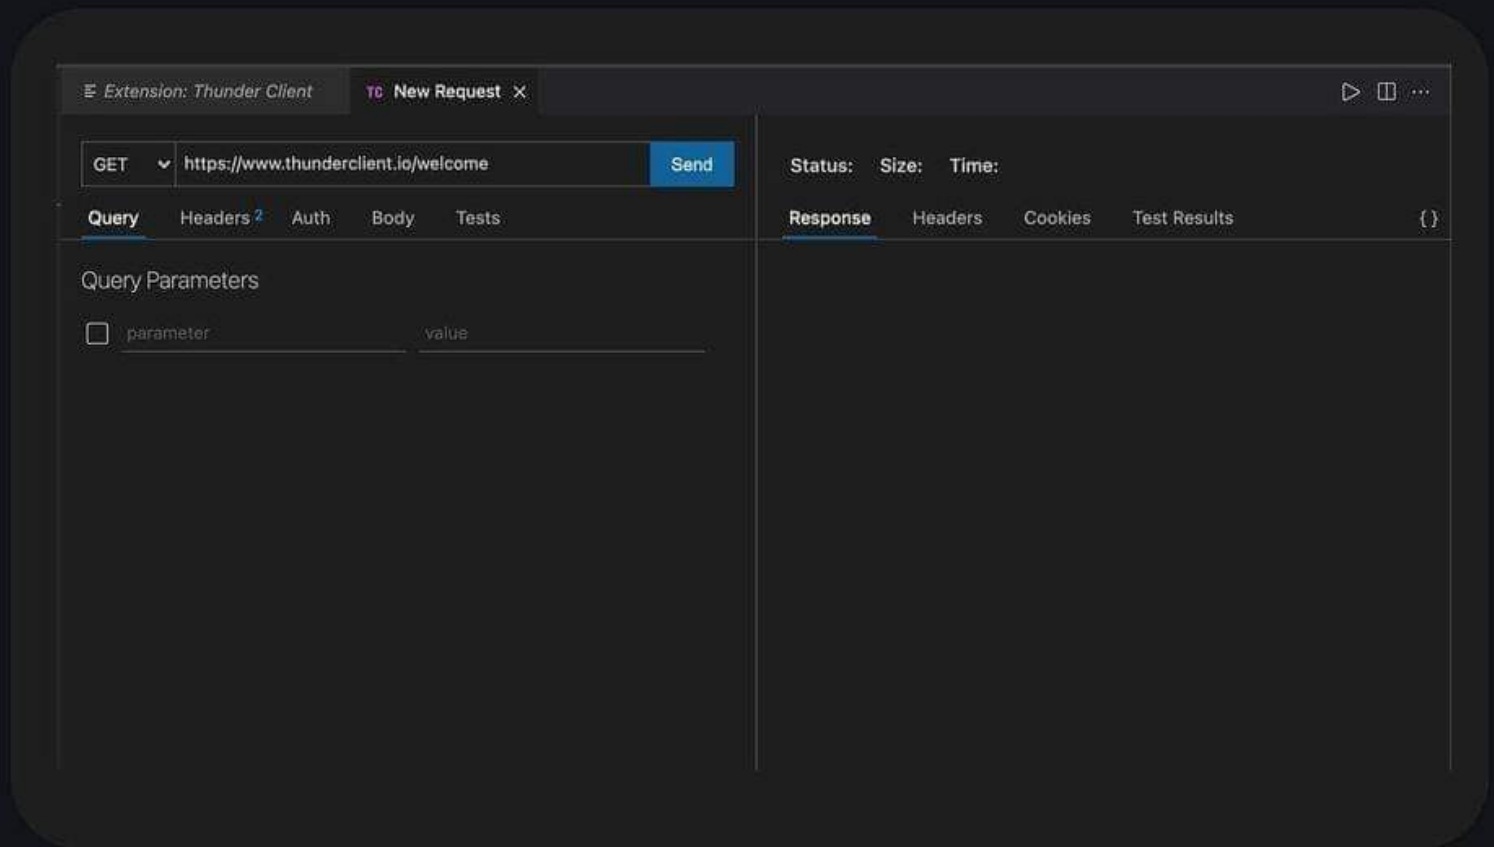

Ranga Vadhineni |  298,196 |  (76)

Rest API Client for VS Code, GUI based Http Client

[Install](#)

After that click on ***new request***,  
following will open in a new tab:

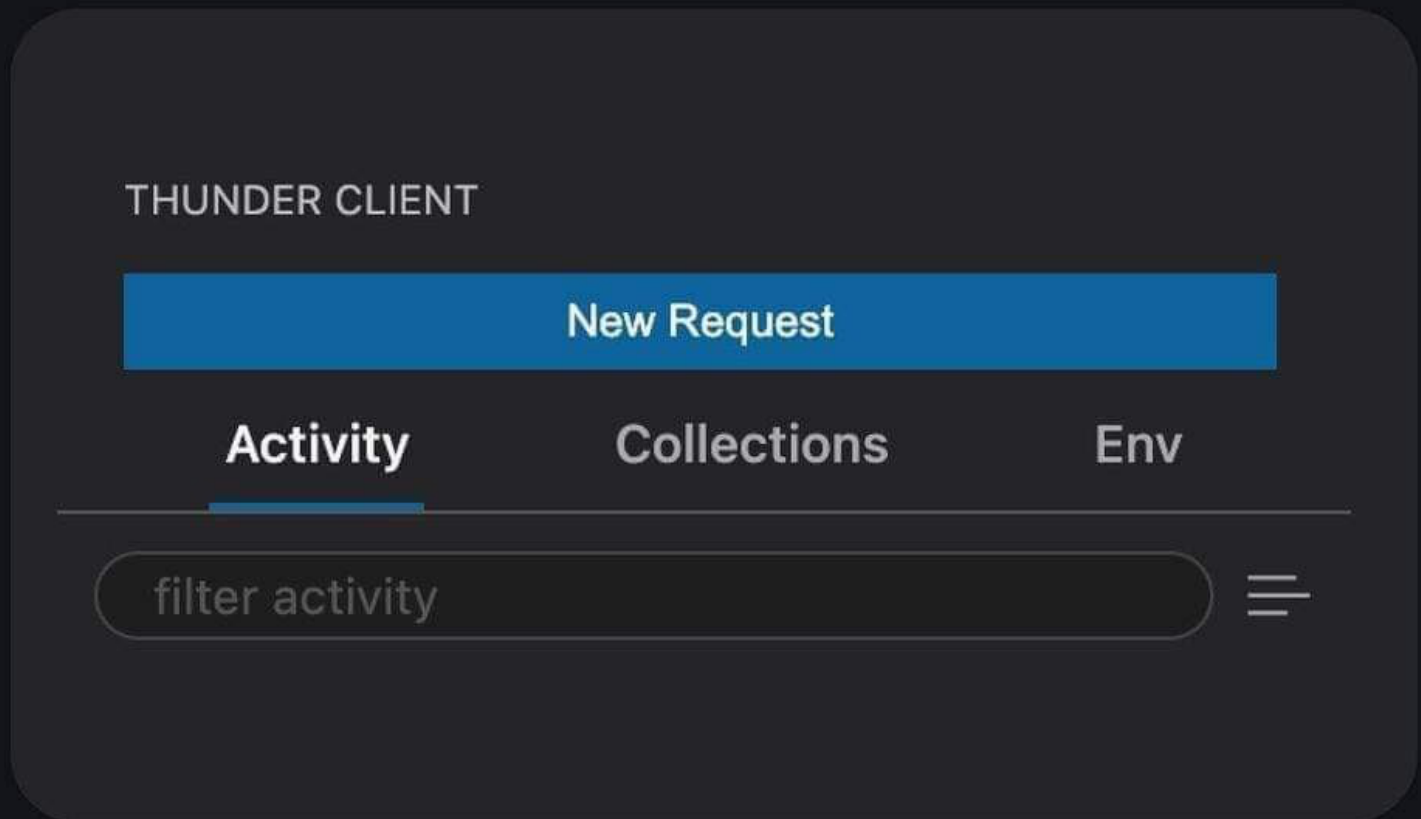

# Voila!

This is similar to postman, this is easier than going to different application and doing the same thing.

Got stuck somewhere? Check official site and it's medium blog:

[www.thunderclient.io](http://www.thunderclient.io)

After then click on ***thunder client*** extension on your left vertical extension pannel. You will get something like this:

# Follow me for such info
